Re: Letter of recommendation for Mr. Tomás Ortega

Dear Ms. Price,

It is a pleasure to recommend Mr. Tomás Ortega for the master's programme in applied mathematics. I supervised his final-year project on numerical methods for coupled heat equations, which he completed with care, independence, and a rare clarity of writing.

Mr. Ortega consistently went beyond what was asked. He rewrote our group's solver to run in half the time, documented every step, and taught two first-year students to use it. His questions in seminars were precise and often changed the direction of our discussions.

I have no doubt that he will be an excellent member of your programme, and I recommend him without reservation. Please do not hesitate to contact me should you need further information.

Yours sincerely,

Hélène Martin
Associate Professor of Mathematics

Enclosure: project summary

Enclosure: project summary

Mr. Ortega's project compared three time-stepping schemes for coupled heat equations on irregular meshes. He showed that a semi-implicit scheme keeps the error within 0.1% at a quarter of the cost of the fully implicit one, and wrote the test cases that our group still uses.
